

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.5 billion to 0.7 billion (United Nations 1999).

There are a number of reasons why the world population is ageing. First, the number of people who survive to old age has increased. This is due to a number of factors, including improved medical care, better nutrition, and a decline in the number of people who die from infectious diseases. Second, the number of people who are born has decreased. This is due to a number of factors, including a decline in the number of people who are born to women who are older than 35 years of age, and a decline in the number of people who are born to women who are younger than 20 years of age.

The ageing of the world population has a number of implications. First, it will increase the number of people who are dependent on others for care. This will increase the demand for health care services, and it will increase the demand for social services. Second, it will increase the number of people who are in the labour force. This will increase the demand for jobs, and it will increase the demand for training and education. Third, it will increase the number of people who are in the military. This will increase the demand for military equipment, and it will increase the demand for military personnel.

The ageing of the world population is a major challenge for the world. It is a challenge that will require a number of solutions. First, we need to improve the quality of health care services. Second, we need to improve the quality of social services. Third, we need to improve the quality of the labour force. Fourth, we need to improve the quality of the military.
