

Apache Druid® Data Modeling Principles

- 1** - *Create each table datasource for a specific set of query shapes*
- 2** - *Transform data, as much as possible, before storage*
- 3** - *Eliminate unused columns*
- 4** - *Filter out unnecessary rows*
- 5** - *Combine rows using query time granularity, approximation and rollup*
- 6** - *Organize segments for fast queries*
