

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply. It is important that we find ways to meet this demand without harming the environment or the world's food supply.

One way to do this is to use sustainable agriculture. Sustainable agriculture is a way of farming that uses natural resources in a way that will not harm them. It uses techniques that will not deplete the soil or the water, and it uses resources that are renewable.

Another way to do this is to use sustainable forestry. Sustainable forestry is a way of managing forests that will not harm the forest. It uses techniques that will not deplete the forest or the soil, and it uses resources that are renewable.

There are many other ways to do this, and it is important that we find ways to meet the world's growing demand for food and other resources without harming the environment or the world's food supply.

One of the most important things we can do is to use sustainable agriculture and sustainable forestry. These are ways of farming and managing forests that will not harm the environment or the world's food supply.

It is important that we find ways to meet the world's growing demand for food and other resources without harming the environment or the world's food supply. This is a challenge, but it is one that we must meet.

One way to do this is to use sustainable agriculture and sustainable forestry. These are ways of farming and managing forests that will not harm the environment or the world's food supply.
